

ABSTRACT

5 Use of 2-(sulphonylamino)phenols as couplers
 in oxidation colouring.

The invention relates to the field of the oxidation
dyeing of keratinous fibres and in particular of human
10 keratinous fibres, such as the hair. The invention
relates more particularly to the use of certain
2-(sulphonylamino)phenols of following formula (I) as
coupler in combination with oxidation dye precursors for

the oxidation dyeing of the fibres.
